

Business & Financial Risk Monitoring

Complement vendor security assessments with continuous operational, reputational and financial risk intelligence

To close the loop on third-party risk, it's critical to complement periodic, "inside-out" vendor assessments with continuous, "outside-in" risk monitoring. However, most monitoring tools only provide cybersecurity data, ignoring important operational, brand, legal, regulatory, reputational and financial issues that can signal business disruptions. These events are easy to miss when security and procurement teams have to comb through clunky RSS feeds and stale credit reports to find them.

Automate collection and analysis of risk intelligence

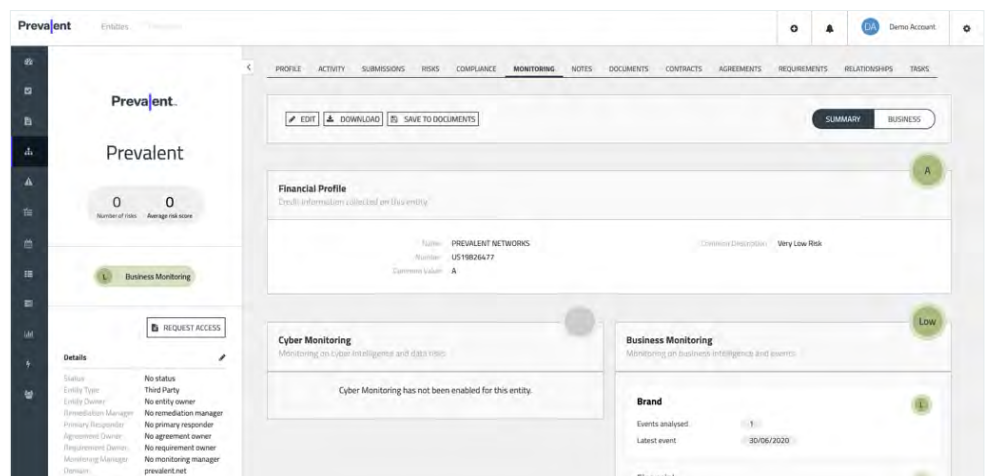

Prevalent Vendor Threat Monitor for Business and Financial Risks delivers continuous risk insights related to operational, brand, legal, regulatory, reputational and financial events affecting your third-party ecosystem. These insights complement cybersecurity risk data from traditional monitoring tools by alerting you to business disruptions that could impact your supply chain.

The solution centralizes risk intelligence on hundreds of millions of companies from over 550,000 public and private sources. All data is aggregated, correlated and scored in a single console that can be accessed by procurement, security and risk management teams across your organization.

Key Benefits

- Quickly determine vendor viability with centralized reporting on current financials, executive changes, acquisitions, lawsuits and more
- Save money by eliminating multiple internal tools for tracking business news and financial information
- Improve risk visibility by augmenting your existing cyber monitoring tools with continuous business and financial intelligence

Prevalent Vendor Threat Monitor for Business and Financial Risks provides centralized access to real-time risk intelligence gathered from over 550,000 sources.

Operational Updates

Access qualitative insights from over 550,000 public and private sources of operational information, including M&A activity, business news, management and leadership changes, competitive news, new offerings, operational updates and more.

Financial Insights

Tap into financial information from a global network of millions of businesses across 160+ countries. Access 5 years of financial performance data, including turnover, profit and loss, shareholder funds, credit ratings, payment history, bankruptcies, investments, and more. Screen new vendors, monitor existing vendors, and evaluate their health for informed sourcing decisions.

Reputational Insights

Avoid reputational damage to your company from working with corrupt vendors and individuals by efficiently:

- Screening for adverse media and negative news coverage from 30,000 global sources
- Monitoring global regulatory and legal sanctions from 1,000+ enforcement lists and court filings including OFAC, EU, UN, BOE, FBI, BIS, FDA, US HHS, UK FSA, SEC and more
- Screening for state-owned and government-linked enterprises to avoid conflicts of interest
- Screening against a global PEP database with over 1.8 million politically exposed person profiles, including their families and associates, to fight corruption and bribery

Key Features

AI-Enabled Intelligence

Leverage contextual machine learning algorithms to analyze data from thousands of sources.

Centralized Risk Management

Display and track vendor threat monitoring status through a centralized management console.

Advanced Event Filtering

Zero-in on critical risks with filters based on event type, priority, date range, and threat category.

Reporting & Analytics

Quickly generate comprehensive, interactive reports with executive summaries for multiple stakeholders.

One Platform for Third-Party Risk Management

Extend coverage to your entire vendor community and add integrated cyber risk monitoring with an easy upgrade. Benefit from unified inside-out and outside-in third-party risk management.
